

ACCESSORIES

5 SERIES

Remote controls

4 remote controls available:
The 2 functions TLC.
The 5 TLC: 2 Functions, 2 Indicators, Increase/Decrease of the programs and displays
The onboard TLC.
The remote display RC5.

5 Series interface / Series 3 and a

Enables the instantaneous swapping of a series 3 instrument with a new generation series 5 instrument. Whilst conserving the same connections as far as the PLC is concerned.

3 interfaces are available:
F5 / F3 - F580 / F3 - F580 / F α

Inputs/Outputs module

For the remote management of measurement units (heads) when long lengths of cables separate the measurement units from the central. Enables the minimisation of the lengths of cable used between the elements.
Management of 3 units max.

Parameter storage/results modules

Two separate modules which enable the transfer of settings from one instrument to another and the recovery of the measurement results for software based assessment.

Y Valve and Mini Y Valve

The Y valves and mini Y valves are 3/2 spring recoil valves with pneumatic or electric control. They offer a high protection against leaks.

PS5 Junction module

Enables the parallel connection of the power supply of each instrument installed in a network architecture. This enables the improved supply of the power to the instruments and removes the risks of power surges in the electrical connections.
